Better look at outside and inside of chair The connections J1 and J2 are shown.

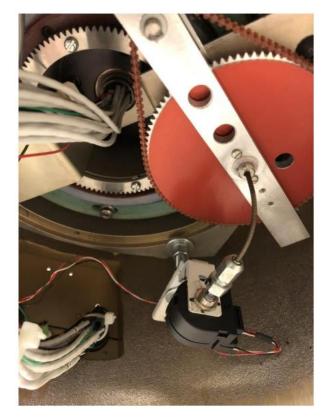

Underneath chair. View of two Amphenol plugs attachments. J2 looks like power to me and J1 looks like electrode leads from commutator.

Big silver gear of chair swivel is in upper part of picture.

View of gear mechanisms for chair. Big silver gear shown as well as smaller Red gear. Black wires leading off the red gear might be some sort of controlling circuitry available through J2?

Original chair plugs pictured above. Found these others after an hour search on the internet. They all look alike (except for the bent one with male and female parts). Amphenol, Canon and even a Bendix.

Looked for one that didn't have threads on the chasis (except for the bent one).

Wildly different costs.

Put the URL so you can take a quick look at specs, where offered.

Any idea?
